Detailed Action

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: For claim 1 Hsu US 5,937,088 discloses a gamma correction method comprising: a first conversion step of converting image data using a first table storing conversion values (first look up table column 2 line 16). A second table storing step of storing in memory a second table (second table column 2 lines 17) storing conversion values set in response to the image data provided at the first conversion step. Christensen jr. et al US 6700561 shows linear interpolation between sparsely distributed input vales and input values which are not distributed by a linear relationship i.e. the time between samples varies (see figure 2 and abstract). Note that DeltaX3 is longer then DeltaX2. Christensen discloses choosing sample point close enough that the slope between the sample points is not significantly different from the average slope (see column 1 lines 50-55). However this does not represent a first table whose input values vary by the equation $u(k) = a \cdot b^k$ where a and b are constants and k is 0, 1, 2...m which is not found in the prior art of record. Claims 2 and 3 contain similar features and are like wise allowable
2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
